

# Oval Sconce Installation

LVXOVSC

Be sure not to exceed the maximum wattage for the transformer used.

## 1. Top Screw

Mark the position for the top screw. Using a 1/8" bit, drill the top screw hole.

## 2. Bottom Screw

5/15" below the top screw hole, you can drill the bottom screw hole using the same 1/8" bit.

## 3. Drill Wire Hole

Using a 7/16" drill bit, drill the hole for the wires 3/4" below the top screw hole.

## 4. Bracket

Using the provided bracket and screws, attach the bracket with the tab pointing in an upright position, creating a tab. As shown. This tab will slide into the back of the sconce. See Insert.

## 5. Feed The Wires

Feed the wires into the wire hole, and direct them up and out of the post for easy connection later.

## 6. Attach The Sconce

Press the sconce against the post while also sliding the sconce in a downward motion. You will feel the sconce attach to the bracket.

## 7. Connect

Plug the male end of the Sconce into the female end of the last component installed.

## 8. Complete
